## **Home Tool Kit**

The Replenishing Care Home Tool Kit consists of an evolving set of nine (9) standalone, complementary cellular health technologies designed to keep each RC Client's *ascending fitness* momentum going in between their use of the PEMF 120, Enhanced EWOT Platform and Scar Tissue Therapy.

Access to these 3 technologies is (either) provided via:

- 12 In-Center Sessions as part of the Replenishing Care Client Service Model, or
- by purchasing the Replenishing Care Home Fitness System.

A Pelvic Correction Kit is a component of the In-Center Therapies and included in (both) the RC Home Fitness Center and RC Home Tool Kit. The Home Tool Kit also includes the World's leading wearable monitoring device – which is easily-customizable to any individual's unique goals and needs - in order to track progress and improvement.

Each of the technologies offered in the Replenishing Care Model is powerful – yet simple and easy to use. STACKING them together both amplifies the individual benefits of each technology and minimizes the time needed for deployment.

**While each Replenishing Care Home Tool kit technology contributes significant “*probable therapeutic contribution*” we wish to highlight [PoP REPLENISHING PCR-CBD](#) which in our experience/opinion is, quite simply, the most valuable of ALL the technologies, followed CLOSELY by PEMF.**

The best news about the Replenishing Care Model is it STACKS these and other cellular health technologies together to combine their respective benefits, and (because the technologies work synergistically) amplify their respective contributions to fitness, wellness and health outcomes. CBD and PEMF are foundational to ALL.

For more information about the Replenishing Care Home Tool Kit please: [Contact us](#)

Replenishing Care (RCC) does not diagnose, treat, nor cure any illness or medical condition. Our services promote ascending wellness and best performance; results vary. Readers and users alike are advised to use the information, technologies, and methods presented under the supervision of their family doctor and/or other health professionals they rely upon.
