**Scar Tissue** forms in the body as a temporary patching for wounds caused by surgery, trauma or repetitive stress (*wear and tear* injury). Scar tissue often connects tissue not normally connected into **Adhesions**. Adhesions commonly spread entrapping nerves and restricting/blocking blood vessels that nourish the fibrotic tissue (causing the tissue to die and become rigid and inflexible). This loss of nerve and blood flow causes pain, numbness and reduced range of motion; most non-diagnosed pain and reduced mobility are caused by scar tissue adhesions.

Fortunately scar tissue is brittle! Replenishing Care's **Scar Tissue Therapy** (SCT) is specifically designed to breakup adhesions while likewise triggering the Tonic Vibration Reflex (TVR) thereby relaxing muscles. Because of this SCT helps many soft tissue issues including but not limited to:

- trapped nerves;
- limited range of motion;
- muscle guarding, cramps and spasms;
- back, shoulder, ankle and neck pain;
- knee problems;
- tennis elbow;
- headaches;
- TMJ;
- Carpal Tunnel Syndrome;
- tendonosis;
- contractures, and
- neuromas.

NOTE: The Replenishing Care Model involves 12 sessions over a 6 week period – and amplifies the benefits further with the use of 10+ other complementary technologies. On a home use basis most owners will do *scar tissue therapy* 3 to 6 times per week according to specific need and/or goals.

Price: US\$1750 (with RC protocol training).
